

Modeling Approach

Bayesian multilevel logistic regression models

Unit of analysis: Paragraph-coding (i.e., all codings by all coders included as rows, n=11,893)

Outcomes: evidence for 2PP and subtypes of 3PP (0=no evidence, 1 = evidence for)

Predictor variables:

- Resource Intensification (RI)
- Technological & Social Differentiation (TSD)
- Kinship Intensity Index (KII)
- Community Size

Random effects for:

- Paragraph ID (n=5,411)
- Coder ID (n=8)
- Document ID (n=643)
- Society ID (n=60)

Models implemented in brms

Descriptive results

Evidence for Punishment Types
